

MACHINE LEARNING

In Q1 to Q11, only one option is correct, choose the correct option:

1. Which of the following methods do we use to find the best fit line for data in Linear Regression?

- A) **Least Square Error** B) Maximum Likelihood
- C) Logarithmic Loss D) Both A and B

2. Which of the following statement is true about outliers in linear regression?

- A) **Linear regression is sensitive to outliers** B) linear regression is not sensitive to outliers
- C) Can't say D) none of these

3. A line falls from left to right if a slope is _____?

- A) Positive **B) Negative**
- C) Zero D) Undefined

4. Which of the following will have symmetric relation between dependent variable and independent variable?

- A) Regression B) Correlation
- C) Both of them** D) None of these

5. Which of the following is the reason for over fitting condition?

- A) High bias and high variance B) Low bias and low variance
- C) Low bias and high variance** D) none of these

6. If output involves label then that model is called as:

- A) Descriptive model **B) Predictive modal**
- C) Reinforcement learning D) All of the above

7. Lasso and Ridge regression techniques belong to _____?

- A) Cross validation B) Removing outliers
- C) SMOTE D) **Regularization**

8. To overcome with imbalance dataset which technique can be used?

- A) Cross validation
- B) Regularization
- C) Kernel
- D) SMOTE

9. The AUC Receiver Operator Characteristic (AUCROC) curve is an evaluation metric for binary classification problems. It uses _____ to make graph?

- A) TPR and FPR
- B) Sensitivity and precision
- C) Sensitivity and Specificity
- D) Recall and precision

10. In AUC Receiver Operator Characteristic (AUCROC) curve for the better model area under the curve should be less.

- A) True
- B) False

11. Pick the feature extraction from below:

- A) Construction bag of words from a email
- B) Apply PCA to project high dimensional data
- C) Removing stop words
- D) Forward selection

In Q12, more than one options are correct, choose all the correct options:

12. Which of the following is true about Normal Equation used to compute the coefficient of the Linear Regression?

- A) We don't have to choose the learning rate.
- B) It becomes slow when number of features is very large.
- C) We need to iterate.
- D) It does not make use of dependent variable.

Q13 and Q15 are subjective answer type questions, Answer them briefly.

13. Explain the term regularization?

ANS:- Regularization is one of the most important concepts of machine learning. It is a technique to prevent the model from overfitting by adding extra information to it. As model will have a low

accuracy if it is overfitting . Sometimes the machine learning model performs well with the training data but does not perform well with the test data.

14. Which particular algorithms are used for regularization?

ANS:- Ridge and LASSO

15. Explain the term error present in linear regression equation?

ANS:- The error term of a regression equation represents all of the variation in the dependent variable not explained by the weighted independent variables.
